

noise reducing TRANSDUCER

Find out why operators who use the General Downhole Noise Reducing Transducer are saying it is "the best transducer I've ever used".

Tool Description

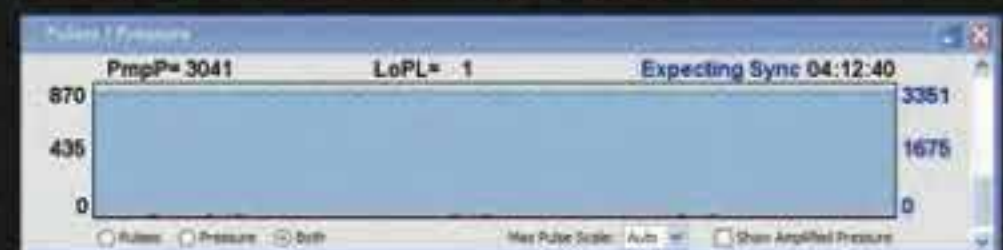

One of the very few things that you can do to eliminate electrical noise originating from faulty rig components is to isolate the pressure transducer from the standpipe. The General Downhole Noise Reducing Pressure Transducer does this while maintaining a 10,000psi rating.

An insulating compound is used to mount the pressure transducer, keeping stray electrical currents from appearing as pressure noise.

Electrical Noise shows up as pressure pulses

Isolating Transducer eliminates electrical noise
